Smarter Supplier Management

ARCUS®
Supplier Management Software

ARCUS® PIM
Product Information Management

# FACTSHEET

**ARCUS® PIM** is an innovative module within ARCUS® Product that automates the process for collecting detailed information about supplier products, while providing a shared view and **process for all departments.**

## ADVANTAGES

- Reduce risk and ensure compliance.
- Efficient and auditable.
- Multi-department collaboration.
- Multi-system integration.

## FEATURES

- Custom product questionnaires and workflows.
- Enhanced search and reporting. function.
- Complete 360° dashboard view.

"We can request, review, approve and access all product specification information in an efficient way. ARCUS® PIM provides an audit trail of the steps we have taken to mitigate the risk and provides a deeper more granular level of control and insight over product information in one streamlined solution"

Maria Loftus, Senior Technical Manager, TGI Fridays

# ADVANTAGES

## REDUCE RISK AND ENSURE COMPLIANCE

ARCUS® PIM allows users to collect vital data such as nutrition, allergen and packaging information direct from suppliers, including supporting documentation and policies to ensure they comply with your requirements and legislation. Suppliers enter the information directly removing the need to re-key the information saving time and reducing potential errors.

## MULTI-DEPARTMENT COLLABORATION

Tailored approval workflows ensure product information is effortlessly shared between departments, particularly procurement, quality/technical teams and supply chain. This collaborative approach creates transparency over the status of suppliers and their products, and removes silos of information.

## EFFICIENT AND AUDITABLE

Product information and supporting documents are uploaded to the cloud, and can be accessed remotely by all key stakeholders at any time, creating a fully auditable and effective process of managing, storing and sharing supplier product information.

## MULTI-SYSTEM INTEGRATION

ARCUS® Connect has been designed to integrate systems in one streamlined process including ERP and recipe management systems. The integration with Fourth's Recipe & Menu Engineering solution enables the transfer of critical allergen, nutrition, packaging and pricing information automatically without the need for re-keying. Our native API has enabled ARCUS® to be connected to a range of external and internal client systems.

# FEATURES

## ENHANCED SEARCH AND REPORTING FUNCTION

ARCUS® PIM uses advanced search functionality to examine keywords in documents and data uploaded by suppliers, such as allergens, which saves users time when checking product compliance.

Custom reports can be created, saved and shared using PIM's user-friendly reporting feature.

## CUSTOM PRODUCT QUESTIONNAIRES AND WORKFLOWS

Fully customisable product questionnaires that are configurable to individual company needs ensures suppliers are uploading all required product information. Similarly, workflows map unique product approval processes, and alerts can be set against milestones and tasks to ensure products are approved by all stakeholders.

## COMPLETE 360° DASHBOARD VIEW

ARCUS® PIM features a comprehensive online dashboard which allows users to view multiple products side-by-side, creating complete transparency and providing a deeper level of understanding and knowledge about all data uploaded to the system.
