ARCUS®
Supplier Management Software

ARCUS®
SSM
Strategic Sourcing Management

FACTSHEET

ARCUS® SSM is an intuitive workflow-based module that maps the various stages of your current or planned strategic purchasing processes, creating a task-based, standardised process that helps to improve efficiency, reduce bottle necks and **ensure best practice in procurement.**

ADVANTAGES

- Increased visibility.
- Streamlined process.
- Central reference point.
- On-going cost savings.

FEATURES

- Dashboards.
- Configurable workflows.
- Alerts and reporting.
- Comprehensive audit facility.

ADVANTAGES

INCREASED VISIBILITY

Enjoy complete visibility over the progress of each sourcing project, giving greater transparency of the sourcing progress and the ability to quickly identify and resolve bottle necks and delays. This collaborative approach creates transparency over the status of procurement projects and removes silos of information.

STREAMLINED PROCESS

Sourcing projects often follow different formats, tasks are frequently duplicated and information is not utilised. ARCUS® SSM ensures all processes follow a streamlined and methodical approach, enforcing best practice. ARCUS® SSM utilises workflow and scheduling with the ability to customise data collection and track performance.

CENTRAL REFERENCE POINT

Sourcing project activity is centrally stored and available in the cloud, making data easy to share and visible to all stakeholders. Tiered levels of users can be deployed controlling visibility, reviewing, approval and creation privileges.

ON-GOING COST SAVINGS

ARCUS® SSM will save procurement professionals' valuable time on each project through controlled response times and proactive review and approval process. As a result, you can achieve lasting cost savings by delivering more sourcing projects and events. ROI can be maximised through achieving the best market rates when deployed as part of a full ARCUS® Source solution alongside ARCUS® eRFX and ARCUS® eAUC.

FEATURES

CONFIGURABLE WORKFLOWS

Electronically map your approval process to match best practice or internal purchasing processes with configurable alerts and emails notifying of key terms, milestones, critical task dates and events. Bi-directional and auto-escalation workflows can be configured to reduce the time spent waiting for approvals and to highlight bottlenecks in the system. This enables future projects to be planned based on quantifiable data.

ALERTS AND REPORTING

Automated alerts, reminders and configurable reports provide complete visibility over project dates and other milestones, which reduces procurement project delivery times, improves efficiency and increases productivity. The status of all projects can be viewed resulting in complete transparency and providing a deeper level of understanding and knowledge about all projects created within ARCUS® SSM.

COMPREHENSIVE AUDIT FACILITY

Full history of sourcing projects can be accessed via the comprehensive audit facility, where users can review, audit and track changes.

DASHBOARDS

Take advantage of full visibility of sourcing projects via the user-friendly ARCUS® SSM Dashboard. All tasks and activities can be easily managed from one place, including: project setups, category research, project strategy, going to market, obtaining sign off and implementation.

ARCUS® BENEFITS

Sourcing, Supplier and Product information in one platform

Using the full range or a combination of ARCUS® modules, organisations can achieve total supply base confidence through a streamlined solution. ARCUS® supplier management software enhances supplier information, contract and performance management whilst also providing in-depth product management and improving sourcing efficiency.
